face="brush script mt"size="6">How the virus spread out in India ?</font></a>

                  </h2></font></center>

            <p align="center"><font face="dotum">The COVID-19 pandemic in India is part of the
worldwide pandemic of coronavirus disease 2019 (COVID-19) caused by severe acute respiratory
syndrome coronavirus 2 (SARS-CoV-2). The first case of COVID-19 in India, which originated from China,
was reported on 30 January 2020. India currently has the largest number of confirmed cases in Asia, and
has the second-highest number of confirmed cases in the world after the United States,with more than
9 million reported cases of COVID-19 infection and more than 100 thousand deaths.On 22 March, India
observed a 14-hour voluntary public curfew at the insistence of Prime Minister Narendra Modi. It was
followed by mandatory lockdowns in COVID-19 hotspots and all major cities. Further, on 24 March, the
prime minister ordered a nationwide lockdown for 21 days, affecting the entire 1.3 billion population of
India. On 14 April, India extended the nationwide lockdown till 3 May which was followed by two-week
extensions starting 3 and 17 May with substantial relaxations. From 1 June, the government started
"unlocking" the country (barring "containment zones") in three unlock phases.The pandemic has left a
severe impact on Indian economy, leading to a negative growth rate for the first time in decades.
Nevertheless, the economy started to rebound after the lockdown was eased.</font></p><br>
